# SEGOVIA

COLOR: GRAHAM

# SEGOVIA

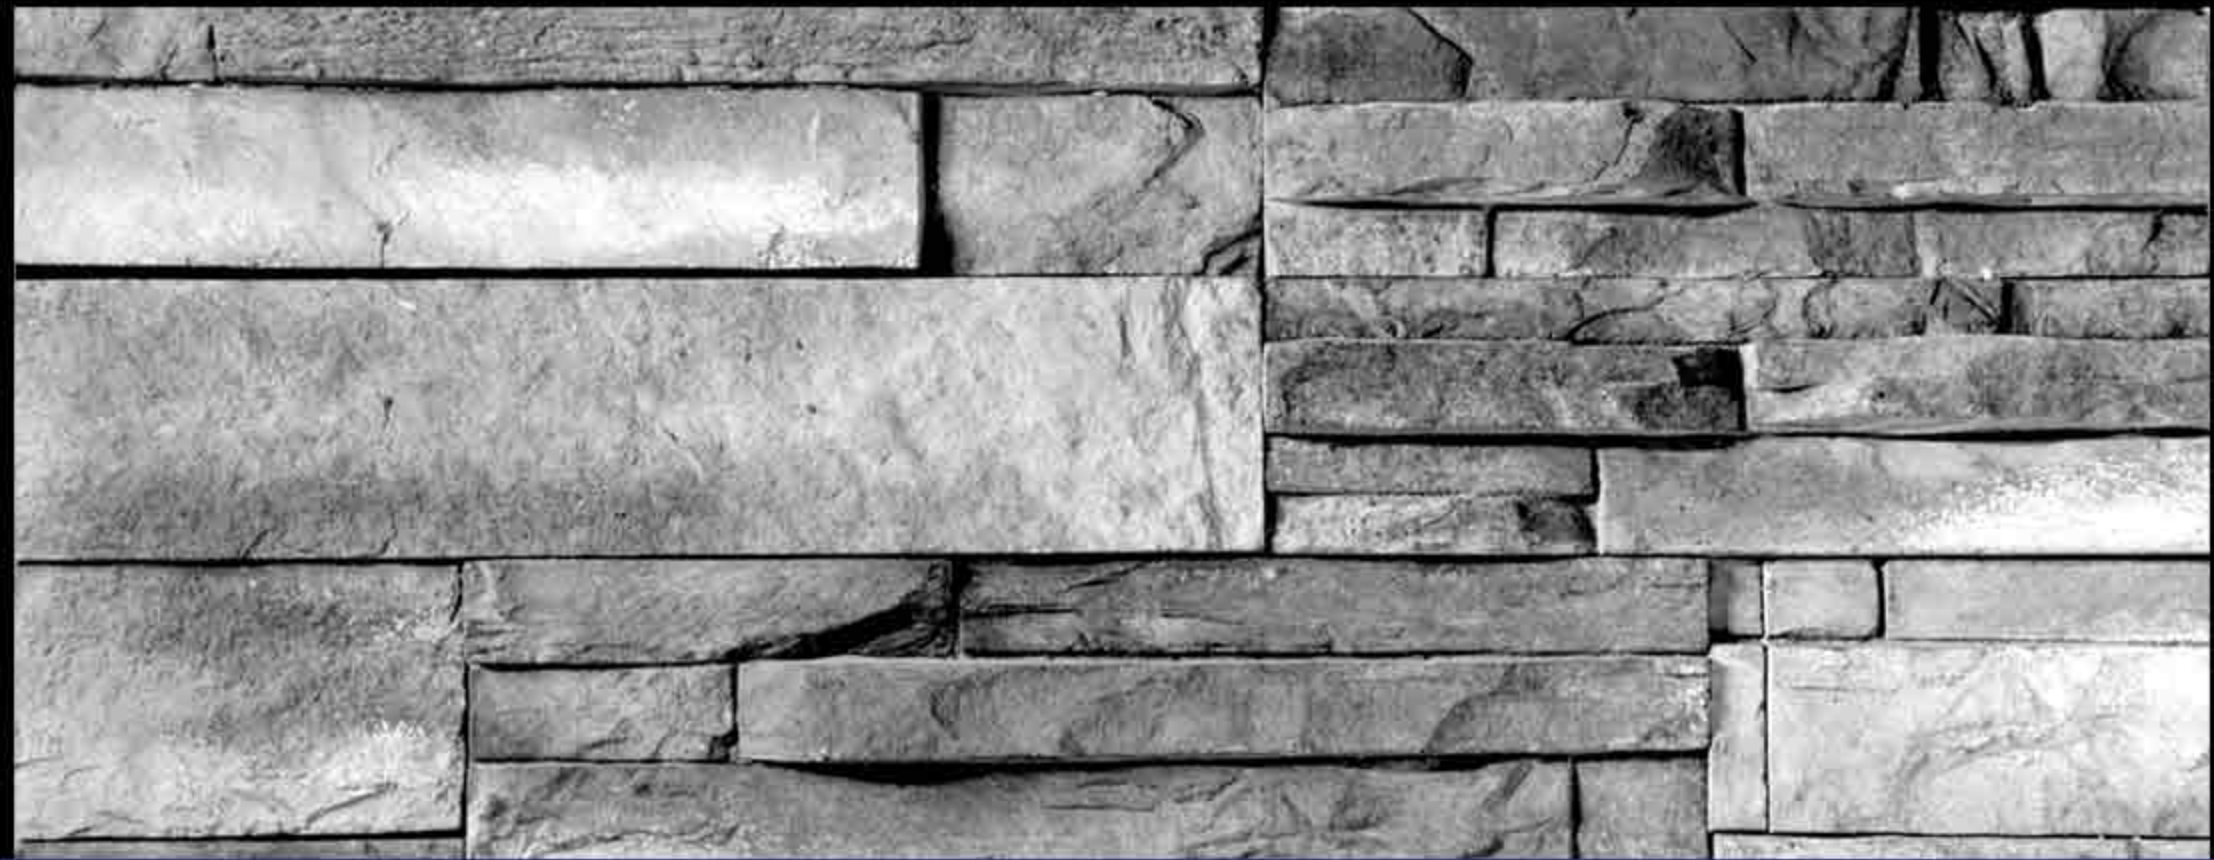

Another brand new profile, Quality Stone Veneer is excited to announce Segovia to our ever-growing line of modern stone styles. Segovia is uniquely designed as a contemporary drystack with low relief in the stone face. Segovia's face texture is sandstone in finish, with castings of natural stone inlays. The offsetting pattern provided by its multiple sized preset pieces guarantee perfection in installation, eliminating the indication of any predetermined pattern. Watch as your project easily transforms with this intricately laid drystack finish.

Contact a local representative to discuss a full spectrum of color options.

# LEDGESTONE

COLOR: RIDGEWOOD

LedgeStone features an intricate pattern of tightly fitting stones that vary in height and width. Our LedgeStone showcases all the detail of a stacked stone look but combines numerous stacked stones into varying sizes of preset panels. Without the stones having to be installed one by one, it is much easier to achieve the tight fitting modern look that makes LedgeStone so popular.

LedgeStone is available in most color options shown on our website.

Project:  
Turtle Manor, Massachusetts

# OHIO DRYSTACK LAMBRIS

Introducing Ohio Drystack Lambris, a system reinventing the world of drystack stone. Our Preset Stone Veneer Technology meets a contemporary drystack finish in this brand new profile. Four sizes of preset stone pieces easily and uniquely lock together in a beautifully detailed offsetting pattern of low relief stacked stone. As with the majority of our Lambris Styles, the stepped offsets of each stone piece break up horizontal and vertical lines throughout the wall, eliminating the appearance of a predetermined pattern. In addition, the face textures of Ohio Drystack Lambris have been cast directly from our deep library of natural stone for a powerful natural detail. Ohio Drystack Lambris can be produced in a wide variety of color options.

As the name suggests, Drystack Lambris is characterized as a drystack façade with natural weathered stone face textures, linear in shape. This style creates a seamless stacked stone look, with pronounced shadowed lines and dimension. Individual natural stones are cast into preset stone pieces to eliminate guesswork during installation, offsetting lines naturally to break up pattern consistency.

# COBBLESTONE LAMBRIS

Cobblestone Lambris revolutionizes cobblestone installation, a style that became prominent in 19th century American architecture where heavy, rounded, water-worn stones were painstakingly stacked in sand and mortar. Cobblestone Lambris brings new life this tradition, installing up to 8 stones with each new piece added to the wall. Preset stone pieces are interlocked together, with varying heights of stone profiles set to intricately build the appearance of a full depth natural façade. Once installed, a mortar joint is added in the designated recess between the stones, eliminating all pattern.

COBBLESTONE LAMBRIS

Designed by Quality Stone Veneer in 2021, Apilada is a brand new stone profile featuring a clean, modern linear look of 3" high drystacked pieces. Multiple size preset stone panels make up the pattern to more easily install and flawlessly achieve a level finish. Additionally, Apilada can be installed using the Quality Stone Veneer Clip System Application method, simplifying the installation process further and eliminating the need for most mortar and wire lath in its installation.

# PIEDRA CORTADA

Piedra Cortada is a beautifully crafted 12" high by 24" length modern block facade. Corner pieces with 12" returns give a full depth appearance at outside corners. Piedra Cortada features an optional 24" by 3" high recessed accent band that can be used in-between rows when desired. Effortlessly transform any project with this sophisticated block composition and lightweight design.

PIEDRA CORTADA

# METROPOLITAN BRICK

---

Designed in 2021, Quality Stone Veneer's Metropolitan Brick features a standard size thin brick veneer, wire cut in style. Six bricks preset into the form of an easy to install, lightweight brick panel keep horizontal rows of brick level across the wall; A process immensely difficult to do otherwise with a one brick system. Corner pieces provide the appearance of a full depth brick around outside corners and columns. The designated recessed areas between the brick pieces allow for a perfect and consistent jointing. Simply joint the pieces once installed, tool the mortar and enjoy the refined transformation of Metropolitan Brick. For a look at Metropolitan Brick's vast color palette, visit [www.QualityStoneVeneer.com](http://www.QualityStoneVeneer.com).
